## Computer-assisted Language Translations with Al

**SMART Communications, Inc.**, New York, has 20+ years experience in technical translation. Today, innovations in *Artificial Intelligence* (AI) at Google, Nvidia, AWS, IBM and Microsoft make computerassisted translations faster, easier and lower cost.

Translations are very accurate when the source texts are written in *Controlled English*, *Simplified English* or *Plain English*. A key benefit is the assignment of accurate language equivalents that improve accuracy and consistency in the target text.

## **How to Prepare for Computer Translation**

Step 1. Write the source texts in Controlled, Simplified or Plain English. The *MAXit Checker* has AI rules that mark text for possible translation problems.

Step 2. Professional translators assign the language equivalents to increase technical accuracy and consistency. A *human-in-the-loop* translator edits for publication quality. AI systems can process formats that include complex .xml <tags> and Word styles.
